Spot registration will be available.

First Prize: Rs. 2000/-

Second Prize: Rs. 1000/-

Dear Sir/Madam

Progress of any nation depends largely on the advancements made in the field of science and technology. Technological and scientific developments facilitate economic advances, improvements in health systems, education and infrastructure. Breakthroughs in science and technology especially in health care and education have improved the lives of people to a large extent. The extent to which developing economies emerge as economic powerhouses depends on their ability to grasp and apply insights from science and technology and use them creatively. Science and technology are integral parts of society and we encounter them in our everyday lives. It is the duty of higher learning centers such as colleges to disseminate and communicate the scientific developments to other sectors such as schools and all other strata of the society.

In this scenario, we are celebrating National Science Day with a focal theme 'Communicating Science for all' with various programmes on 27 February 2019. The active participation of students and teachers from various institutions are encouraged.
